

The hidden

STAR!

EMICODE®

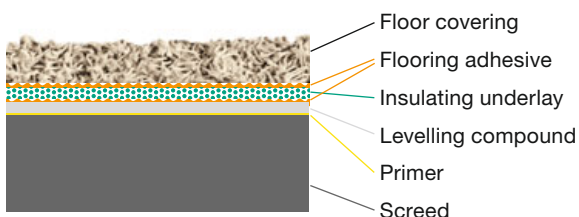

Take a look under your floor!

Flooring adhesives with the EMICODE® EC1^{PLUS} quality mark and other building materials such as levelling compounds or primers are “very low emission”.

They provide

- the greatest possible assurance against indoor air pollution,
- long-term health protection,
- high environmental compatibility.

“This is our promise”

Floor construction

EMICODE® - Quality mark for peace of mind

Every renovating or new-build project is a question of trust – trust in products, trust in craftsmen.

Indoor air pollution is an important issue. Anyone aiming for the highest level of protection should look for the EMICODE® quality mark. It stands for tested, “clean” flooring adhesives, levelling compounds and primers. Products with this test label are kind to health and the environment.

“The EMICODE® quality labelling system identifies modern, solvent-free and low-emission building materials.”

Klaus Winkels,
Executive Director of GEV
(Association for the Control of Emissions in Products for
Flooring Installation, Adhesives and Construction Materials)

EMICODE®

Reliable guidance since 1997

GEV was founded more than fifteen years ago. With the EMICODE® label it offers reliable guidance for choosing flooring adhesives, levelling compounds and primers.

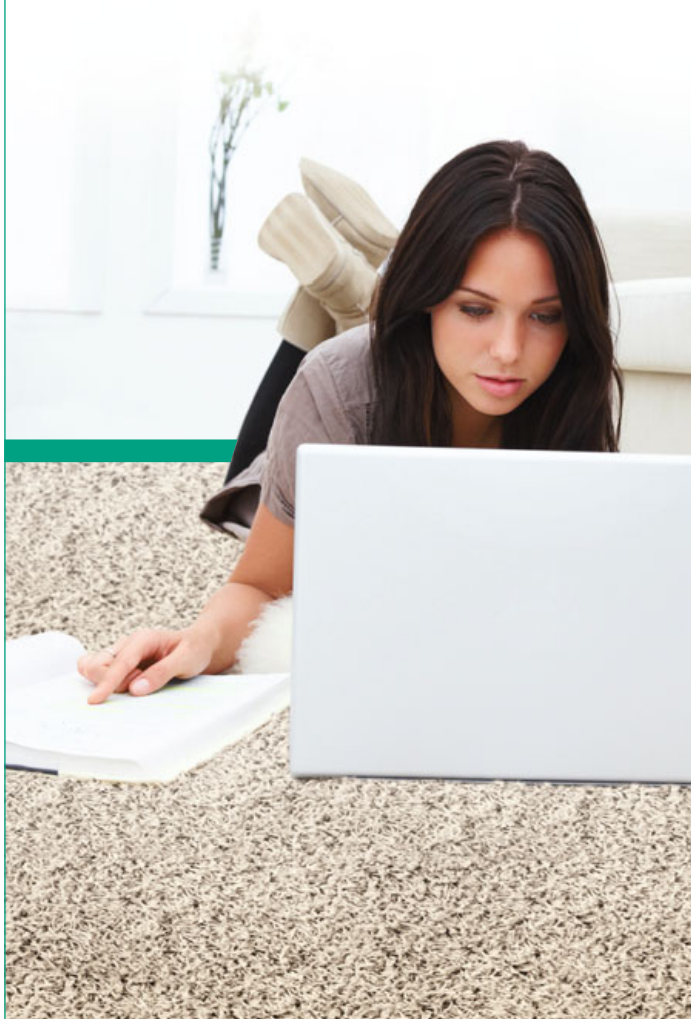

The GEV monitors compliance with its stringent quality standards through regular random checks. The entire monitoring procedure is conducted by independent experts and test institutes.

The EMICODE® EC1^{PLUS} class is by far the most stringent of all quality labels in the area of emissions and consumer health protection. That gives you the greatest possible peace of mind.

www.emicode.com

Health-conscious and environmentally aware consumers will find extensive information on the web about products and manufacturers of the labelled flooring adhesives, levelling compounds, primers and other building materials.
